Gloves/Transfer Equipment

**Cotton 11714**

- Essential tool for proper weight-handling
- Proper protection for preventing hand residue
- Residue can throw off a weight's calibration and certification for accuracy
- Rice Lake recommends using cotton gloves to handle all precision weights

Plastic 11773

Plastic gloves are an acceptable handling tool to keep dirt and residue off your weights. Better than handling precision weights bare-handed, plastic gloves are economical, disposable, convenient, and help maintain the integrity of your weights.

Guidelines for Selecting a Case

- Find the diameter, height and total mass of the weights that will need a case
- Review case dimensions to determine best fit
- Note weight limits of the case and choose accordingly

Things to keep in mind:

- Foam needs 0.5 inches between weights and edge of case
- Always select the smallest case best fitting your need
- Weights should always be stored and transported in the upright position
- The shoulder edge of the weight should be level with the foam insert
- Some cases are recommended for storage only and should not be used for shipping

Medium-Duty Cases

Medium-duty cases are primarily used for manually transporting test weights as they effectively absorb shock and resist changes in environment.
